

JET VENTILATION CATHETER

AeroJet[™]
VENTILATION CATHETER

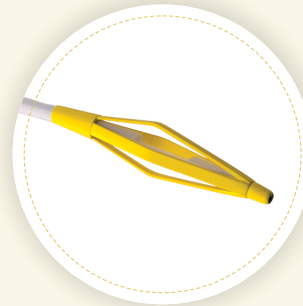

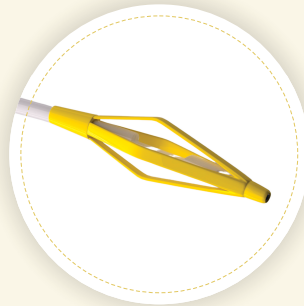

Ordering Information

Product Code

AERO-SA1

Description

Aero Jet Ventilation Catheter
(qty 1)

Basket centers
catheter on insertion
& gently collapses
on removal

The Aero Jet Ventilation Catheter is a unique triple lumen catheter made from a single extrusion of PTFE. The catheter is extremely flexible and has a kink resistant design, with a low profile 3.85mm shaft. The Aero Jet has two independent monitoring lumens, which can be used to measure both EtCO₂ & tracheal pressure while delivering jet ventilation. The main jet lumen exits at the distal flex tip of the centering basket. The unique design of the centering assembly centers the catheter on insertion and gently collapses the basket on removal to protect the surgical site.
